                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Ketogulonigenium plasmid. Methods for transforming Ketogulonigenium are also described. The invention is useful for producing 2-keto-1-gulonic acid (2-KLG) from L-sorbose or sorbitol. The present sequence represents the nucleotide sequence of replicon #2 on the Ketogulonigenium endogenous plasmid pADMX6L1. Note: The present sequence for SEQ ID No 5 given in the sequence listing is different from that given for SEQ ID No 5 in Fig 5 (AAS17123).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1046
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1663
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1603 aggctgcaaaagcaacgggtgtggcgaaccgcaaccatcactcgggcgctaaaaagcggta 1662
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to a new bacterium of genu Ketogulonigenium. Ketogulonigenium may further comprise transgene, comprising a DNA sequence from an endogenous Ketogulonigenium plasmid. Methods for transforming
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New bacterium of Ketogulonigenium genus, useful for producing 2-keto-L-gulonic acid from sorbose or sorbitol, comprises transgene containing DNA sequence from endogenous Ketogulonigenium plasmid -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 WO200177348-A2

                                                                                                                                                                                                                            cc genes, their use in the discovery of novel antiblottics, the essential cc genes themselves and the encoded proteins. The prokaryotes used are cc Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella cc pneumoniae, Pseudomonas aeruginosa and Enterococcus faecalis. The cc invention is also useful for the identification of potential new targets cf or antiblotic development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins. cc and to obtain antibodies capable of binding to the expressed proteins. cT he proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen cor homologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence encodes an essential prokaryotic cellular proliferation protein.

Note: The sequence data for this pattent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Email: tshini@genes.nig.ac.jp
A backbone of the vector is pBluescript II, that was in vivo
excised from a modified IPs phage vector (Mo bi Tec, Germany). XhoI
digested-5' end of cDNA is ligated to SalI site of the vector, and
the BanHI digested-3' end including poly-A tail is ligated to BanHI
site of the vector. cDNA instert could be amplified with
conventional T7 and T3 primers. This normarized full- length cDNA
library was generated basically according to the method described
in Genome Research 10, 1617-1630 (2000), Carninci, P. et al.
Protonemata were blended by the POLYTRON, and then cultivated on
the BCD medium containing lum NAA (naphthalene acetic acid) for 8
to 11 days under the continuous light.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             BJ204205 normalized full length cDNA linear EST 25.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         A backbone of the vector is pBluescript II, that was in vivo excised from a modified IPS phage vector (Mo bi Tec, Germany). XhoI digested:5 end of cDNA is ligated to Sall site of the vector, and the BamHI digested-3' end including poly-A tail is ligated to BamHI site of the vector. cDNA instert could be amplified with conventional T7 and T3 primers. This normarized full-length cDNA library was generated basically according to the method described in Genome Research 10, 1617-1630 (2000), Carninci, P. et al. Protonemata were blended by the POLYTRON, and then cultivated on the BCD medium containing 0.5MM BA (benzylaminopurine) for 8 to 13 days under the continuous light.

A backbone of the vector is pBluescript II, that was in vivo
A backbone of the vector is pBluescript II, that was in vivo
A backbone of cDNA is ligated to Sall site of the vector, and
the BamHI digested-3' end including poly-A tail is ligated to BamHI
site of the vector. CDNA instert could be amplified with
conventional T7 and T3 primers. This normarized full-length cDNA
library was generated basically according to the method described
in Genome Research 10, 1617-1650 (2000), Carninci, P. et al.
Protonemata were blended by the POLYTRON, and then cultivated on
the BCD medium containing 0.5um BA (benzylaminopurine) for 8 to 13
days under the continuous light.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Center For Genetic Resource Information

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     A backbone of the vector is pBluescript II, that was in vivo excised from a modified IPS phage vector (Mo bi Tec, Germany). XhoI digested-5' end of cDNA is ligated to SaII site of the vector, and the BamHI digested-3' end including poly A tail is ligated to BamHI site of the vector. cDNA instert could be amplified with conventional T7 and T3 primers. This normarized full-length cDNA library was generated basically according to the method described in Genome Research 10, 1617-1630 (2000), Carninci, P. et al. Protonemata were blended by the POLYTRON, and then cultivated on the BCD medium containing lum NAA (naphthalene acetic acid) for 8 to 11 days under the continuous light.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    National Institute of Genetics 1111 Yata, Mishima, Shizuoka 4:

(E-mail: segrefigenoscope.cns.fr - Web: This GSS is part of a random genomic sequencing program of thirteen yeast species: Saccharomyces bayanus var. uvarum, Saccharomyces exiguus, Saccharomyces servazzii, Zygosaccharomyces rouxii, Saccharomyces kluyveri, Kluyveromyces thermotolerans, Kluyveromyces saccharomyces kluyveri, Kluyveromyces thermotolerans, Kluyveromyces lactis var. lactis, Kluyveromyces marxianus var. marxianus, Pichia angusta, Debaryomyces hansenii var. hansenii, Pichia sorbitophila, Candida tropicalis and Varrowia lipolytica. Genomic inserts of 3 to 8 kb were prepared and both extremities were sequenced. See Wincker, P. and Weissenbach, J. Genomic exploration of the hemiascomycetous yeasts: 1. A set of yeast species for molecular evolution studies
FEBS Lett. 487 (1), 3-12 (2000) Souciet, J.L., Aigle, M., Artiguenave, F., Blandin, G., Bolotin-Fukuhara, M., Bon, E., Brottier, F., Epingsare, Olarente, B., de-Montigny, J., Dujon, B., Durrens, P., Lepingsare, Llorente, B., de-Montigny, J., Neuveglise, C., Ozier-Kalogeropoulos, O., Potier, S., Malpertuy, A., Neuveglise, C., Ozier-Kalogeropoulos, O., Potier, S., Saurin, W., Tekaia, F., Toffano-Nioche, C., Wesolowski-Louvel, M., Janes, A., Calon, J., Changa, J., Calon, CNS07CVP 1005 bp DNA linear GSS 08-JUL-2001 T3 end of clone BD0AA007C03 of library BD0AA from strain CBS 94 of Candida tropicalis, genomic survey sequence. Similarity 57; Conserv Genoscope.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      IDENTITY_NUC
